

## A B S T R A C T

TRANSMISSION SYSTEM WITH SPATIAL, TEMPORAL, AND  
FREQUENTIAL DIVERSITY

The invention relates to digital signal terrestrial transmission systems operating in accordance with the MPEG2-TS standard and the DVB-T standard.

The system comprises:

- N transmitters (12, 14) or transmission channels operating respectively at N different frequencies F1 to FN, each transmitter receiving a same digital signal to send in the form of packets in accordance with the MPEG2-TS standard,

- N receivers (22R, 24R) or receiving channels operating respectively at N frequencies F1 to FN, each receiver supplying a succession of packets in accordance with the MPEG2-TS standard,

- N error detection devices (22E, 24E) for detecting errors in the packets supplied by each receiver,

- N synchronization devices (22S, 24S) for synchronizing the packets supplied by each receiver, and

- a device for selecting one packet among the N available packets that does not contain an error or, failing that, a packet that corresponds to the lowest error rate.
